

CHANGING LIVES

GENDER PAY GAP REPORT 2024

Gender Pay Reporting

Gender pay reporting requires employers with 250 employees or more to publish calculations every year to show the pay gap between male and female employees. Data within this report reflects payments made as of the snapshot date of 05-April-2023

Gender Pay Reporting Measures:

Mean Gender Pay Gap

The percentage difference between the mean (average) pay of males and females.

Median Gender Pay Gap

The percentage difference between the median (midpoint) pay of males and females.

Mean Bonus Gap

As our organisation does not pay bonus payments, this criterion is not applicable.

Median Bonus Gap

As our organisation does not pay bonus payments, this criterion is not applicable.

Bonus Proportions

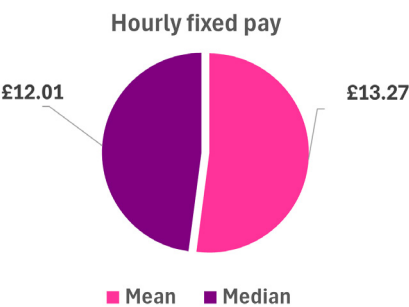

As our organisation does not pay bonus payments, this criterion is not applicable.

Quartile Pay Bands

Proportion of males and female full-pay relevant employees in the lower, lower middle, upper middle and upper quartile pay bands.

Gender Pay Gap

Difference between male and female pay as of 5 April 2023

	Mean			Median		
	2021	2022	2023	2021	2022	2023
Gender Pay Gap	4.2%	2.6%	2.5%	0.2%	-1.8%	-7.5%
Bonus Gap	N/A	N/A	N/A	N/A	N/A	N/A

Mean figures shows that pay is more favourable towards males
Median figures show that pay is more favourable towards females in the current year

The data is based on a total of 519 employees as of 5 April 2023, of which 374 (72.06%) were female and 145 (27.94%) were male. This is mostly consistent with our reporting for the previous year (2021/22). We see a mean figure of 2.5% (decrease of 0.9% on previous year’s reporting), i.e. the mean hourly rate difference between male and female employees is £0.34 as of 5 April 2023 (increase on previous year where the mean figure was £0.29).

There are other factors that need to be considered when considering pay difference, one of which is that women are, more likely than men, to work in part-time roles which can then impact their pay making it lower. This further impacts the pay report. According to the Office for National Statistics (ONS), median hourly pay for full-time employees was 7.7% less for women than for men in April 2023, while median hourly pay for part-time employees was 3.3% higher for women than for men ([The gender pay gap - House of Commons Library \(parliament.uk\)](#)).

Workforce Quartiles

As with many charities Changing Lives are predominantly female. The figures show that there are three times as many females as males in all four quartiles. The pay quartile with the highest proportion of male is the upper quartile. This is a dominant factor with the pay difference in the upper quartile being 8.51% in favour of males.

Pay Quartile	Male			Female		
	2021	2022	2023	2021	2022	2023
Upper	33.8%	29.6%	28.2%	66.2%	70.4%	71.8%
Upper Middle	26.8%	29.6%	27.9%	73.2%	70.4%	72.1%
Lower Middle	39.0%	29.6%	27.7%	61.0%	70.4%	72.3%
Lower	19.9%	29.6%	27.9%	80.1%	70.4%	72.1%

Improving our Gender Pay Gap

We are fully committed to ensure we have equality and inclusivity within our organisation and take every opportunity to embed these values into our day-to-day work to support people who face the most challenging of circumstances.

Our gender pay gap results demonstrate that we continue to maintain a position whereby our pay difference is relatively small; however, we persist in our efforts to close the pay gap.

We promote and support work-life balance such as flexible working and parental policies in our efforts to aid in retaining our female talent. We do and will continue to put our best efforts in, ensuring our pay structures are transparent and that our promotional criteria is assessed through regular reviews as this can ensure fairness and accountability.
